Docker installed and running

```
ubuntu$ docker --version
Docker version 29.2.1, build a5c7197
ubuntu$ docker run hello-world

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
 1. The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
 $ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:

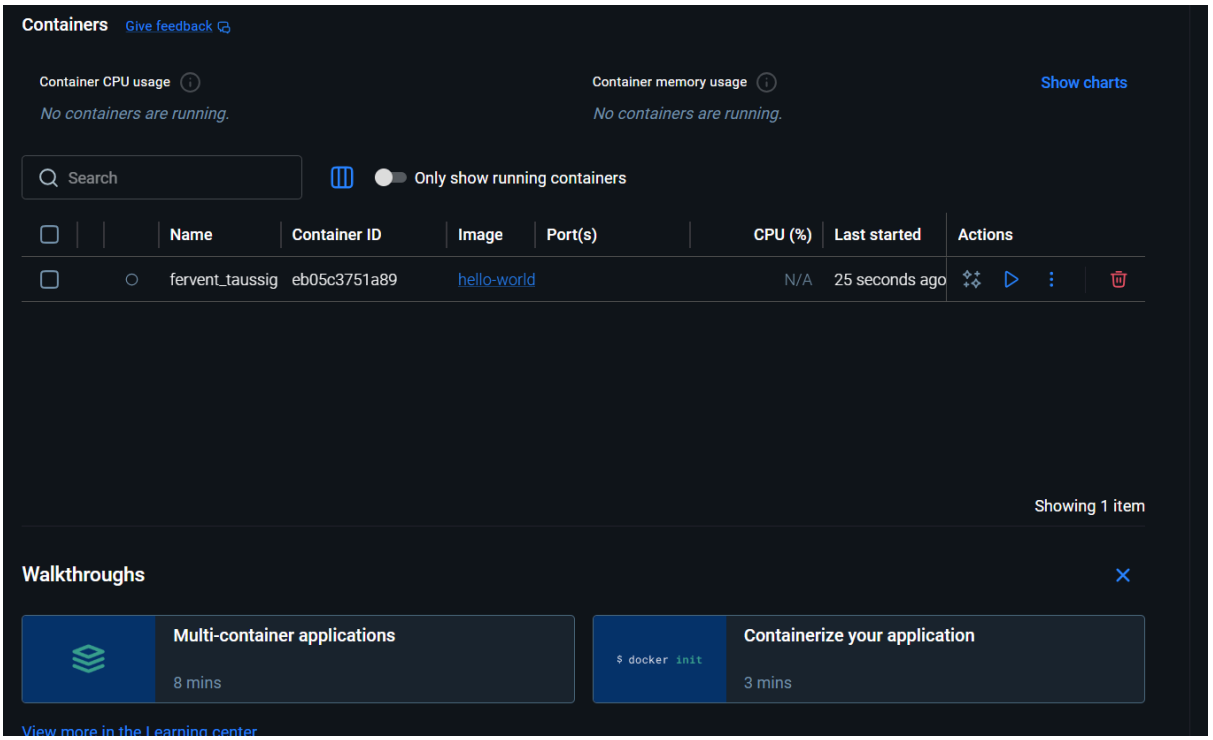
```



Kubectl Installed

```
ubuntu$ minikube version
minikube version: v1.38.1
commit: c93a4cb9311efc66b90d33ea03f75f2c4120e9b0
ubuntu$
```

Minikube installed

```
ubuntu$ minikube version
minikube version: v1.38.1
commit: c93a4cb9311efc66b90d33ea03f75f2c4120e9b0
ubuntu$
```

Oracle VM VirtualBox + Extension Pack is installed

```
Extension Packs: 1
Pack no. 0:   Oracle VirtualBox Extension Pack
Version:        7.2.6
Revision:       172322
Edition:
Description:    Oracle Cloud Infrastructure integration, PXE ROM.
VRDE Module:
Crypto Module:
Usable:         true
Why unusable:
```

Started kubctl &

```
ubuntu$ minikube version
minikube version: v1.38.1
commit: c93a4cb9311efc66b90d33ea03f75f2c4120e9b0
ubuntu$
```

Name spaces & Nginx Pods created and running

```
ubuntu$ minikube start --driver=docker
😄  minikube v1.38.1 on Ubuntu 22.04 (kvm/amd64)
✨  Using the docker driver based on existing profile
👍  Starting "minikube" primary control-plane node in "minikube" cluster
🚜  Pulling base image v0.0.50 ...
🤷  docker "minikube" container is missing, will recreate.
🔥  Creating docker container (CPUs=2, Memory=3072MB) ...
🐳  Preparing Kubernetes v1.35.1 on Docker 29.2.1 ...
🔗  Configuring bridge CNI (Container Networking Interface) ...
🔎  Verifying Kubernetes components...
    ▪ Using image gcr.io/k8s-minikube/storage-provisioner:v5
🌟  Enabled addons: storage-provisioner, default-storageclass

❗  /usr/local/bin/kubectl is version 1.31.0, which may have incompatibilities with Kubernetes 1.35.1.
    ▪ Want kubectl v1.35.1? Try 'minikube kubectl -- get pods -A'
🏄  Done! kubectl is now configured to use "minikube" cluster and "default" namespace by default
ubuntu$ kubectl get nodes
kubectl get namespaces
NAME       STATUS   ROLES           AGE   VERSION
minikube   Ready    control-plane   21s   v1.35.1
NAME              STATUS   AGE
default           Active   21s
kube-node-lease   Active   21s
kube-public       Active   21s
kube-system       Active   21s
ubuntu$ kubectl create namespace vicky
kubectl get namespaces
namespace/vicky created
NAME              STATUS   AGE
default           Active   47s
kube-node-lease   Active   47s
kube-public       Active   47s
kube-system       Active   47s
vicky             Active   0s
ubuntu$
```

```
ubuntu$ kubectl get pods
NAME    READY   STATUS    RESTARTS   AGE
nginx   1/1     Running   0          3m25s
ubuntu$
```
